

SENIOR DATA MIGRATION DEVELOPER

About Delta

Delta is the leading supplier of SIPP and SSAS administration technology. The UK's leading insurers, banks, wealth managers, platforms and actuaries rely on our proven technology, exceptional service and understanding of the retirement market. Our clients choose us for our proven track record of delivering superior, cutting edge technology, supported by our expert knowledge and outstanding team.

Working for Delta

We know you are a professional who will play an integral role individually and collectively in developing the long term financial success of the company. We regularly monitor engagement and use this feedback to ensure we remain a great place to work. This means our employees are motivated to produce work of a demonstrably high standard and possess a passion for excellence we can best describe through our internal values as:

Benefits at Delta

Based predominantly in our central offices in Birmingham and occasionally in our Nuneaton office this permanent position (subject to a three month probationary period) offers 37.5 hours per week, Monday to Friday. Flexibility around office hours of 9.00 am – 5.00 pm is available on an ad hoc basis to provide employees flexibility for home/work balance.

In return you will need to be flexible to work occasional hours during peak upgrade times. This may include some planned evenings and weekends. In addition to a competitive salary, we strongly believe in offering an above market benefits package.

SENIOR DATA MIGRATION DEVELOPER

The Role

Platinum is a project working on the re-platforming of Delta's two core products, SIPP~Pro and SSAS~Pro, into Microsoft technology using the Agile development methodology. We are developing services in C# and the frontend (Single Page Application) in Javascript/HTML. This role will focus on migrating data from the legacy and third-party systems into Platinum.

At this stage in the project we are looking for confident developers who can quickly onboard and add value to the Data Migration project and take on complex migration challenges of migrating data from multiple data sources.

Person Profile:

- The role requires an experienced Developer with at least 5 years' experience who is delivery focused and takes personal accountability for the quality for all deliverables.
- The candidate must have strong communication skills and be able to collaborate on topics with staff with different levels of technical understanding.
- Ability to work independently and within a team
- Must be able to guide and mentor junior developers when required
- Analytical mind with problem-solving aptitude
- Must be self-motivated to stay on top of the latest technologies

Core Skills Required:

- Significant experience using current versions of C# and .net
- Demonstrable understanding of object-oriented design
- Knowledge of Entity Framework and Microsoft T-SQL
- Experience using JavaScript
- Development of REST based services
- Demonstrable understanding of test-driven design, especially unit testing in a .NET environment
- Identify performance bottlenecks and propose solutions
- Previous data migration experience

Secondary/Advantageous Skills:

- Experience using Azure, especially using data factory, messaging and event technologies
- Solid understanding of current web technologies and trends
- Experience of writing automated tests for example in Postman
- Working within an Agile /Scrum Environment
- Familiarity with CI/CD tools
- Financial Services with pensions experience would be advantageous
- An interest in data science
